

GConnect Group

Telecommunications Infrastructure | ICT Solutions | Network Engineering | Automation

Rooted in infrastructure. Built for connection.

GConnect Group is a South African telecommunications and ICT infrastructure partner delivering practical, reliable and accountable technology solutions across municipal, commercial and residential environments.

Registered entity GConnect IT & Network Solutions (Pty) Ltd	Registration number 2025/399876/07
Operating base Soweto, Johannesburg, Gauteng	Profile purpose Client, partner and tender introduction

Company Snapshot

GConnect Group exists to help organisations build, maintain and control the infrastructure that keeps people, sites and operations connected.

Through GConnect IT & Network Solutions (Pty) Ltd, the company provides fibre deployment support, civil works, network maintenance, ICT solutions, security systems, asset tracking and managed IT services.

Vision

To become a trusted South African infrastructure and technology partner known for reliable delivery, practical innovation and disciplined execution.

Mission

To deliver cost-effective technology and infrastructure solutions through transparent communication, safe field practice and accountable operational control.

Client promise

Clear scope, visible progress, documented evidence and clean close-out.

Leadership experience

Practical telecommunications and fibre infrastructure experience across field delivery, maintenance and project coordination.

What We Do

GConnect provides integrated support across physical infrastructure and digital operations. The value is not only the work completed on site - it is the visibility, coordination and accountability around that work.

Fibre Infrastructure Fibre route support, fibre blowing, installation, splicing, termination, OTDR testing, ODF installation, POP support, commissioning and project documentation.	Civil Works Trenching, duct installation, reinstatement, manholes, road crossings and telecommunications site preparation.
Network Maintenance Preventative maintenance, emergency restoration, fault finding, network upgrades and municipal fibre support.	ICT and Network Solutions Structured cabling, Wi-Fi deployments, LAN/WAN infrastructure, server support and managed IT services.
Security Solutions CCTV, access control, electric fencing, intercom systems and site security technology support.	Asset Tracking and Automation Fleet and asset visibility, operational dashboards, workflow automation, field reporting and AI-assisted command systems.

Fibre Infrastructure Division

The fibre division supports deployment, recovery and maintenance where field readiness, technical discipline and daily communication matter.

Core capabilities

- Fibre optic route support and blowing operations
- Splicing, termination and test documentation
- ODF and POP installation support
- Damage location, restoration and escalation support
- Daily field progress updates with photographic evidence

Client benefit

Clients receive a delivery partner who understands both the technical pressure of live infrastructure and the operational pressure of deadlines, access, safety and reporting.

How We Deliver

Every engagement should be controlled from first instruction to final close-out. GConnect's operating model is designed around practical accountability.

1. Scope confirmation Agree the work, site requirements, deliverables, timelines, payment milestones and acceptance criteria.	2. Site readiness Confirm access, tools, materials, team availability, safety needs and escalation contacts.
3. Field execution Deploy the right team against agreed quality, safety and progress requirements.	4. Progress reporting Capture daily updates, blockers, risks, photos, responsible person and next action.
5. Quality inspection Check completed work against requirements before handover.	6. Close-out Submit completion records, test evidence, handover confirmation and supporting documents.

Control principle

No project should start without approved scope, accountable owner, delivery target, risk path and close-out standard.

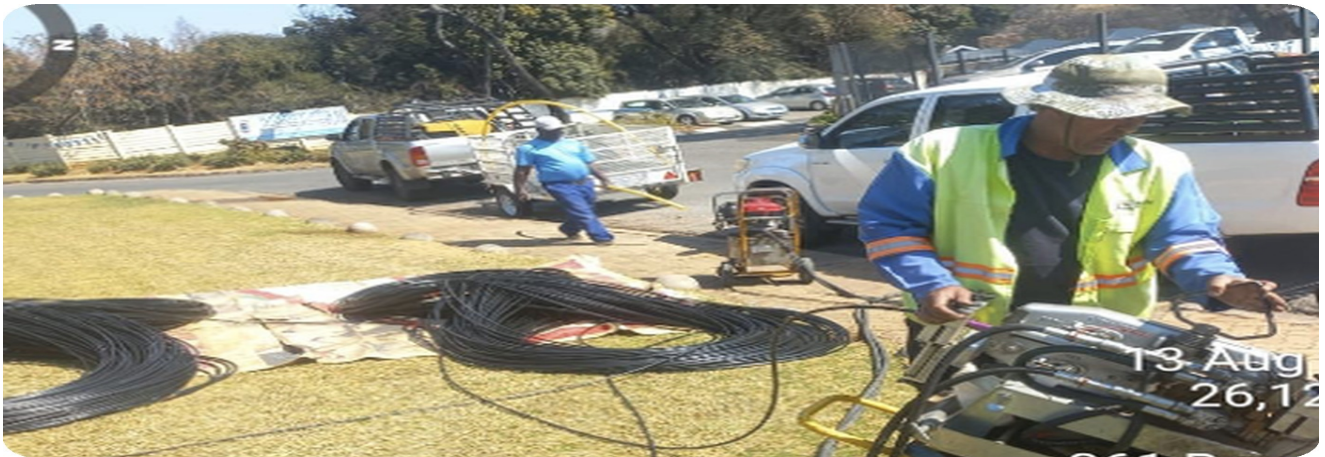

Why Partner With GConnect

GConnect brings together hands-on infrastructure delivery, ICT capability and operational command thinking. That combination helps clients reduce delays, improve visibility and build technology systems that support real work on the ground.

Best-fit clients

- Municipal and infrastructure delivery teams needing reliable fibre support
- Property developers and commercial sites needing ICT, network or security systems
- Businesses that need automation, asset visibility and practical operational reporting
- Partners that need accountable field capacity and close-out documentation

GConnect Group - Building Today for a Better Tomorrow
